How to run the system

Front-end

1. Inside the `react_argue_tutor-main` folder, run

    (1) `npm install` → wait for the dependencies to be downloaded

    (2) `npm start`

2. Type in *1234-rdexp* as the code when asked (**disactivated for now**)

Back-end

1. Inside the `WritingTutor_with_Chatomatic-master` folder do:

2. Create a new environment (*python version 3.8 recommended*)

3. Activate the new environment

4. run `python requirements_installer.py` to install all the dependencies

5. run `python WritingTutorTG3.py` to start the server
